

AGRICHAIN 360

Investment & Pilot Proposal — Busoga Region, Uganda

The ask: UGX 45,000,000 (~ \$12,000 USD)

Catalytic 6-month funding for the two-hub pilot (Mayuge & Bugiri drying hubs): IoT solar-dryer technology, quality-testing capability, drying infrastructure, farmer onboarding and hub operations. The complete digital platform — web application, Android app, API, database, AI decision advisor and Digital Quality Passport system — is already built, deployed and tested; this budget activates the physical layer.

Pilot targets: 200 farmers · 40 MT dried & certified · 2 drying hubs · 5 districts (Mayuge, Bugiri, Iganga, Jinja, Kamuli).

Budget summary

Category	Amount (UGX)	What it covers
A — IoT drying technology	8,400,000	8 solar-powered sensor kits (ESP32, DHT22, load cells), assembly, installation, spares
B — Quality testing & lab	7,700,000	Moisture meters, 75 aflatoxin rapid tests, scales, sampling, lab cross-verification
C — Drying hub set-up	4,700,000	Raised drying racks, tarpaulins, storage pallets (both hubs)
D — Farmer onboarding	7,600,000	Hermetic bags, 4 village agents, 8 training sessions
E — Platform operations	2,530,000	Hosting, IoT data, SMS alerts, technical support
F — People & field ops	8,700,000	2 hub operators, agronomist, transport & monitoring
G — Compliance, M&E, admin	2,100,000	Independent audits, printing, impact reporting
H — Contingency (8%)	3,270,000	Price movements, spares beyond buffer
TOTAL	45,000,000	Cost per farmer reached: UGX 225,000

Revenue model (configured live on the platform)

Drying fees UGX 200–500/kg by crop · testing UGX 100–400/kg · 3% marketplace commission · buyer subscriptions UGX 100,000/month. Projected pilot-cycle revenue ≈ UGX 19M; break-even on recurring operating costs inside the 6-month pilot; ≈ UGX 14M/month contribution at scale.

What is already delivered (in-kind contribution)

Full platform build — web app, Android app (v1.1.3), REST API, PostgreSQL database, rules-based decision advisor, Digital Quality Passports with public verification, marketplace with order flow — live at <https://16.192.159.6> under a trusted HTTPS certificate; estimated development value ≈ UGX 18,000,000, contributed by the founding team.

Impact KPIs

≥160 quality passports issued · ≥90% of batches passing aflatoxin limits · 15–30% price premium for certified farmers · ≥60 completed buyer orders · ≥95% sensor uptime — all measurable directly from the platform database.
